

Invisible Make-Up®

Or the art of powerful and new soft focus performances.

Only three ingredients and four soft focus elements in this formula. Novel Biomass branched VegeLeam® brings huge new textures that actually shames old SVHConcern silicones.

Some are really new compositions for the Soft Focus Effect, playing on over 4 pigments bases and therefore, Refractive Index values, or the secret behind excellence in blurring.

Excellence is also in Photostability with very low values: Delta E of 0.22 and then, after Xenon light testing, just 0.35 for an equivalence at the equator of over 6 hours at noon power. Oxygen at 300% brings also a smoothing wrinkle reduction.

Invisible Make-Up® is actually greatly visible before and after, bringing instant satisfaction to the eyes.

Anti-Age Factor®

Or how to implement the first Epigenetic In Situ and In Vivo test method.

Testing is the only way forward in Cosmetic Science, after more than 40 years of Destructive and Regression in selection of materials, by ever more wokism marketing and absurd charters.

Naturality has been a watershed for consumers who have suffered from the abuse of silicones and worse probably with the growing of Brain Degenerative Concern.

The Epigenetic test method of six simple tests, each three from In Situ and In Vivo data, allows safe C&T. Among the large range of tests, you have: Hair Volume under WET SEM conditions, as well as Wrinkles smoothing Delta Depth and Delta Width, Microcirculation Plasma stimulation, collagen visual modification, 3-Dimensional testing on stratum corneum, epidermal, and dermal Elasticity. Many other tests are necessary of course, but they will depend on how our customers wish to enhance incredible performances.

Anti-Age Factor® is a window to discover these hyper precise testing. Elasticity testing is excellent, Smoothing wrinkles is good, especially rarely seen on Forehead wrinkles.

Science analyticals will already open a new performance and safety route.

Invisible Patch®

Blue Iridescence

Again, minimalist complex and composites number of ingredients allow maximum performance. It was created for weekends at home. A blue violet hue shows the efficiency of the formula during daytime light. Microcirculation is at a relaxing level: only 3% plus of plasma flow. Wrinkle Smoothing is excellent with WET SEM Reverse In Vivo test method with reduction from Delta Depth of 72% and Delta Width of 61%.

Ingredients are from modern Biomass origin with two main family structures of water: Betula Alba Juice and VegeLeam® biomass branched lipids.

Silicones were a real backdrop to skin performance as they are indeed, since September 1997, obviously harmful and concerning to the health of consumers, but it seems they are potentially responsible for current Brain Degenerative Concern (look this up on CHATGPT).

It is time even more for safety first and performance. Think Skin, Safe Skin and Body.

YouthDation®

Or a girl's best friend for looking young, longer and longer.

Betula Alba Juice at Plasma Osmose equivalence helps to boost Biomass very branched lipids VegeLeam® to offer High performance SPF colour and UVA Anti-Age Factor® protection.

Adding Volume ColourSpheres® enhances the soft focus effect and also the mattness look, as well as increasing non-invasive mineral UV filters performances. Fourteen materials or complex or composites materials offer the real difference in performance from the ageing high numbers of plant extracts. Those always increase skin ageing, with high ROS cascades.

Based on EU ISO 24443:2 UVA test method, we get excellent AAF® values:

- SPF 318 (only 16% of nano TiO₂, of course)
- UVA Ratio 1.94 UVA-PF + 41 Stars
- Critical Wavelength 383.75, exceptional in the market place
- UVA value validated.

Concepts are based on the new type of cosmetics where all raw materials are tested form Epigenetics pass testing methods In Vivo and In Situ, but they keep the best textures with actual effective skin performance.

Skin Lift®

Acne Oxygen Repair

The use of Betula Alba water allows to boost the Oxygen repair and to heal acne scars as well as to reduce the colour of the scars. Omega Kalahari Seed Oil is served up in a very effective minimalist formula. It is so different compared to over crowded extracts types of formulas found everywhere that reduce the efficiency but worse, actually age the skin and increase scarring.

For this formula, only five complexes and remarkable results. In Situ microcirculation increases plasma flow by 136%. Wrinkles decrease by 45% in Depth, and by 36% in Width. The Osmose value of the formula is close to the human plasma. Oxygen volume is at 36.8 ml. Remarkable.

SupraMolecularTonic®

Oxygen 36.8 ml value, Bi-Phase.

Again a simple minimalist formula with only 7 complexes: a crystal clear bi-phase, with the water being the floating phase.

High energy is shown by an increase of 71% in plasma flow, 360 times more oxygen than usual current market skincare formulas.

There is a good wrinkles smoothing with a reduction of 18% (Delta Depth) and of 15% (Delta Width).

Again, an only use of Osmose equivalent Vegetable water (Betula Alba Juice).

It is ideal for polluted Metropolises of the modern world and essential for the real needs of oxygenated polluted skins.

Areal Difference®

Lips SPF 461 - PA+46

Synthesis lipids route in non-invasive mineral filters was the only route until most recently.

Again, Zinc Oxide nano materials (the only type to offer such protection potential) bring huge power to a special Le Soin Couleur®, protection of high performance to Lips as they are, after all, the first Melanoma area. The main benefits: branched, extremely photostable, oxygen stable, tested half-life, and allergen free. Lipids bring the best dispersion agent. Added to this, zeta potential booster for high negative charges brings effective mucous particulate application. Thin Layer Isolate helps also in this high extreme Protection. TEWL values are still increasing after 240 nm.

Areal Difference® Lips has also ISO 24443:2 test values: SPF 461 UVA value PA+46 stars UVA Ration 2.49, a Critical Wavelength of 380.85 and of course, UVA Pass.

Best performers in Anti-Age Factor® and any skin protection can only be very small minimalist INCI names. Here, only 15 INCI names in & complexes.

Again Areal Difference®, the concept.

Eclipse de Temps -Time Eclipse®

A SupraMolecularTonic® complex formula is designed to bring night long effect, energising the plasma activity over a long time frame (Fibronectin flow).

Oxygen level is at 18.4 times more than the normal current market offer. That is 18.4 ml of Oxygen volume versus extreme low level of 1%. Usual In Situ and In Vivo testing has been done with following results. SEM reverse wrinkle inprint Delta D: 44.7% night reduction in Depth, Delta W: 37.4% reduction in Width.

High energy Biomass lipids are used: VegeLeam®, along with the most effective non Vegan type Naturals as Beewax, Lanolin, and FDA GRASE approved polymers. DSC results are available as well as Elasticity and TEWL, all very favourable in results.

Over the years, all charters have made cosmetics worse for your actual skin. Time Eclipse® is that freedom to Think Skin First, and forget the wokism of the last 45 years. Science is real and marketing, well, has aged you so much.

Secret Wrinkles®

Serum.

A special SupraMolecularTonic® formula is the base for this instant visual skin and smoothing effect. Only vegetable based water is in all structural Hydrasoft® gels.

A green Biomass VegeLeam® lipid, with good energising effects on dermal skin level, is boosted by a 910% increase of Oxygen (9.1 ml O₂) present in the formula versus usual current levels in other market cosmetics currently on sale worldwide. Testing showed a 42% increase in Plasma Flow (a non-invasive In Situ method with DLCMicroscopy). Elasticity on In Situ showed, at Collagen level response, an increase of 149% after 10 minutes and remarkably, still 130% after 60 minutes. Eye contour by SEM reverse imprint (In Vivo test method) showed a reduction of 99% of Delta D (for depth of wrinkles) and 14.4% reduction in Delta W (for width of wrinkles).

More information is available by asking us.

Balming®

or the art of modernising the original cosmetic formula, the balm.

Most of the best formulas are actually balms.

Reasons are quite simple, as they are initially based on waxes and resins to stabilise lipids. Today, we harmonise three rheologies: Newtonian, Thixotropic, and Pseudo-plastics. We have created our own Thixolastics® which adds the use of Spheres to reduce Brownian agglomerations.

In this field, we have now added huge processes in Synthesis and Biomass textures that have liberated new textures and of course, high performances for the skin.

No need for water, which brings use of emulsifiers that harm live dermal cells, preservatives which again harm Dermal live cells, and allows free perfume formulas, no base orders.

Discover a new dimension with Balming®, the High Performance of skin improvements.

Eau de Finlande®

A three phase system.

Two waters are used in this complex delivery system for lipids actives. Here notably just perfume but ideally, any ACI lipid. We are using a mineral water from Finland, rich in magnesium, and extremely low, in calcium.

Three structural systems are used with variable surface charge values, to keep that complexity till application on the skin.

As a perfume is a rather fast stimulation time frame, this three phase system allows much longer the olfactive presence, and if it is an ACI lipid, it stimulates much longer the dermal activity through plasma flow, relaxation. The perfume type is a wild green inspired Chypre variation. Perfume to Skin Care and Skin Care to Perfume (liposome current fad is in for perfume without ethyl alcohol).

We can control actives by using different structures of a formula, and can easily have four to five phases.

Skin Design®

We bring the first step in our program of Skin Design® approach to replace invasive surgeries or injections.

We formulate with the second best non-invasive mineral filter, zinc oxide, of course in the size that actually gives Ultra Violet Protection. We combine with photostable nude colour dispersions to bring an invisible look, transparent on your skin.

All materials are tested: Photostability, Oxygen Stability, Thin Layer Isolation, Allergen Free and most importantly, Short Half-Life in the human body. Indeed, organic filters (due to their high hydrophobic Log P) have half-life well above 1850 days, a pretty long time to flow in your brain (Check this up on ChatGPT: Brain Degenerative Concern).

ISO 24443:2 EU testing gave UVA Ratio 1.36- UVA-PF 44.2 equivalent in the In Vivo Japanese PA system at 11 Stars, Critical Wavelength of 381.6 , and of course a UVA Pass with a SPF 50+ (actually 60).

Skin Design® program is based on the analysis of your Skin Phototype from I to VI, plus oily to dry skin allows us to design your face against ageing, but more importantly, prepare the structural modifications possible with other volume modifications of the facial features.
